

PHP-Nuke Platinum

Permissions

Installation instructions

Steps to complete: 12

Numerous features of PHP-Nuke Platinum require additional, non-default permissions to fully function correctly. CHMOD is a UNIX command that allows you to tell the system how much [or little] access it should permit to a file. The CHMOD command is used to change the access mode of a file.

CHMOD the following files/folders

1. **/files**
 - a. CHMOD [777]
 - b. Engine [Folder]
2. **/includes/ps_upload**
 - a. CHMOD [777]
 - b. Engine [Folder]
